

Leonardo Alvarenga

Belo Horizonte, MG, Brazil | (+55) 34 99813-4367 leonardo.a.alvarenga@gmail.com | linkedin.com/in/leonardo-a-alvarenga | github.com/leo-alvarenga | leoalvarenga.dev

Professional Summary

Full-stack Software Engineer (Front-end focus) with 4+ years of experience in creating and optimizing high-performance web applications. Acted as a technical reference in Front-end, specializing in React, TypeScript, and Design Systems. Proven track record in creating and applying code standards (via *Git Hooks*, *Linters*, *Formatters*, and *Code Review*) to ensure scalability, reusability, and high software quality. Proficient in DevOps practices, including Infrastructure as Code (IaC) and Kubernetes, for process automation and ensuring high availability.

Experience

Software Engineer

FITec | Belo Horizonte, Brazil | August 2025 - Present

- Implemented Infrastructure as Code (IaC) via Terraform, automating environment provisioning and version control, which resulted in reducing manual setup time from 4 hours to just 20 minutes
- Developed Helm Charts for Kubernetes deployments, ensuring standardization and consistent service management across development, staging, and production environments
- Engineered and optimized React and TypeScript interfaces for corporate Geographic Information Systems (GIS), focusing on performance improvements and reducing loading time for large volumes of data
- Structured and ensured good development practices, guaranteeing software architecture scalability
- Created and maintained the project *Design System*, utilizing Storybook for documenting created components

Front-end Software Engineer

Vetta | Belo Horizonte, Brazil | March 2023 - July 2025

- Developed Viridis NG, a web application ecosystem focused on optimizing energy and material consumption in the steel industry, serving over 8 global-scale industrial plants
- Engineered high-performance features and components for the internal Design System, focusing on standardization and reusability by multiple teams across different projects
- Architected and maintained REST APIs with Node.js and Express, covering endpoint documentation and defining versioning strategies to ensure service integrity
- Refactored and optimized critical modules, applying Design Patterns to ensure code scalability and maintainability
- Ensured technical parity and international collaboration, acting as the interface between complex industrial requirements and high-availability software deliveries

DevOps Engineer

Vetta | Belo Horizonte, Brazil | August 2022 - February 2023

- Maintained and ensured high availability (99% uptime SLAs) for critical services, orchestrating mission-critical environments via Kubernetes and Docker Compose
- Managed Cloud-Native infrastructure autonomously, responsible for provisioning and governance of Kubernetes clusters for multiple internal products
- Technical interface in international projects, strategically acting in DevOps and IT Governance fronts to accelerate time-to-market through advanced automation
- Mastered the delivery lifecycle (CI/CD), designing deployment pipelines and monitoring/observability strategies to ensure software resilience in production
- Point of reference for engineering teams, solving complex architecture, deployment, and environment configuration impediments

DevOps Analyst - Internship

Vetta | Belo Horizonte, Brazil | March 2022 - July 2022

- Stabilized and monitored services, working on environment configuration via Kubernetes and Docker Compose to ensure the availability of testing applications
- Provisioned scalable infrastructure, including the creation and adjustment of Kubernetes clusters for demonstration and staging environments
- Integrated into DevOps fronts in international projects, focusing on automating IT Governance processes and optimizing the environment demand flow
- Developed and refined CI/CD pipelines, applying containerization concepts and monitoring observability metrics to support code quality
- Provided technical support to engineering teams, working on deployment inconsistency triage and ensuring parity between development and production environments

Education

Systems Analysis and Development

Unopar | Pará de Minas, Brazil | Completed June 2025

Computer Science

Newton Paiva | Belo Horizonte, Brazil | June 2027

Technical Skills

Languages & Frameworks: JavaScript (React.js, Next.js, Node.js), TypeScript, Svelte, Lua, SQL

DevOps & IaC (*Infrastructure as Code*): Docker, Kubernetes, Terraform, Git & GitFlow, CI/CD Pipelines

Architecture & Front-end: Design Systems, Component Libraries, Performance Optimization, GIS Applications, REST APIs, Microservices, Micro Frontends

Cloud & Infrastructure: Cloud Computing, Linux, Shell Scripting (Bash), Automated Provisioning, Environment Monitoring, High Availability

Metodologias: Agile, Scrum, Kanban

Languages

- **English:** Advanced (C1, TOEFL ITP)
- **Portuguese:** Native
-
